

Table of Contents

	<i>Page</i>
Preface	iii
1. Introduction	1
<i>How the exercises in this workbook are structured</i>	<i>3</i>
<i>Why are some instructions and steps repeated in different exercises?</i>	<i>4</i>
2. What You Need To Know To Get Started With R	6
<i>What is R?</i>	<i>6</i>
<i>Where can I get R from?</i>	<i>6</i>
<i>How can I use R?</i>	<i>7</i>
<i>What special terms are used when describing things in R?</i>	<i>9</i>
<i>How do I get started with using R?</i>	<i>11</i>
<i>What do I do if I get stuck when using R?</i>	<i>15</i>
3. Preparing Biological Data For Statistical Analysis Using R	18
<i>Exercise 1.1: How to import data into R</i>	<i>20</i>
<i>Exercise 1.2: How to check a data set for errors in R</i>	<i>27</i>
<i>Exercise 1.3: How to divide a data set into subsets in R</i>	<i>33</i>
<i>Exercise 1.4: How to join data sets together in R</i>	<i>38</i>
<i>Exercise 1.5: How to calculate summary statistics from a data set in R</i>	<i>42</i>
4. Creating Graphs From Biological Data Using R	46
<i>Exercise 2.1: How to make a frequency distribution histogram</i>	<i>49</i>
<i>Exercise 2.2: How to make a bar graph based on the number of records in different categories in a data set</i>	<i>57</i>
<i>Exercise 2.3: How to make a bar graph of mean or median values with error bars</i>	<i>68</i>
<i>Exercise 2.4: How to make a box plot to show the spread of data within different groups in a data set</i>	<i>81</i>
<i>Exercise 2.5: How to make a scatter plot from biological data</i>	<i>89</i>

5. Assessing And Transforming The Distribution Of Biological Data Using R	102
<i>Exercise 3.1: How to assess whether a biological data set has a normal distribution using R</i>	106
<i>Exercise 3.2: How to normalise biological data using a mathematical transformation in R</i>	116
6. Using Statistical Analysis To Compare Data From Different Groups In R	127
<i>Exercise 4.1: How to test for a difference in the central values (means/ medians) of two groups</i>	130
<i>Exercise 4.2: How to test for a difference in the central values (means/ medians) of two paired groups</i>	144
<i>Exercise 4.3: How to test for a difference in the variances of two or more groups</i>	154
<i>Exercise 4.4: How to test for differences between three or more groups</i>	167
<i>Exercise 4.5: How to test for differences in frequencies of occurrence measured on an ordinal or categorical scale</i>	177
7. Using Correlations And Regressions To Analyse Biological Data In R	190
<i>Exercise 5.1: How to test for a correlation between two variables</i>	193
<i>Exercise 5.2: How to test for a relationship between two variables using linear regression</i>	207
Appendix I: A Simple Strategy For Working Out How To Do A Specific Task In R	217
Appendix II: How To Create An Annotated R Code Archive	223
Appendix III: How To Round Numbers When Reporting The Results Of Statistical Analyses	229
Index Of R Commands And Arguments Used In This Workbook	231
