## Table of Contents

	Page
Preface	iii
1. Introduction	1
How the exercises in this workbook are structured	3
Why are some instructions and steps repeated in different exercises?	
2. What You Need To Know To Get Started With R	6
What is R?	6
Where can I get R from?	6
How can I use R?	7
What special terms are used when describing how to make graphs and maps in R?	9
How do I get started with using R?	12
What do I do if I get stuck when using R?	16
3. How To Create Your First Graphs In R Using GGPlot	19
Exercise 1.1: How to create a basic graph in R using GGPlot Exercise 1.2: How to create a publication quality graph using	23
GGPlot	33
Exercise 1.3: How to create different types of graphs from the	
same data set	48
Exercise 1.4: How to create a graph that shows data from more	<b>-</b> .
than one data series	54
4. How To Create Graphs Displaying Groups Of Data With GGPlot	70
Exercise 2.1: How to classify data into groups and create a bar graph based on them	73
Exercise 2.2: How to create a bar graph of count data with multiple	, 0
data series on it	86
Exercise 2.3: How to create a bar graph of means/summary	
statistics per group for one variable with error bars on it	100
Exercise 2.4: How to create a point graph of summary statistics for	
one variable with vertical error bars	113
Exercise 2.5: How to create a point graph of summary statistics for	
two variables with horizontal and vertical error bars	123

Exercise 2.6: How to create a box plot to summarise the	
data from different groups in a data set	135
5. How To Create Graphs Displaying Individual Data Points	151
Exercise 3.1: How to create an X-Y scatter plot displaying	
one data series using GGPlot	<i>153</i>
Exercise 3.2: How to create an X-Y scatter plot with multiple	
data series on it	166
Exercise 3.3: How to create an X-Y scatter plot with a	
minimum convex polygon (MCP) enclosing all the	
records for each data series	179
Exercise 3.4: How to create a line graph to display time	
series data	188
Exercise 3.5: How to create a matrix of pair plots to check	
for covariance between variables in a data set	203
6. How To Create Other Types Of Graphs	211
Exercise 4.1: How to make a pie chart using GGPlot	214
Exercise 4.2: How to create a bubble graph	222
Exercise 4.3: How to create a mixed type graph which shows	
different data series in different ways	229
Exercise 4.4: How to create a simple X-Y graph displaying	
the movements of a tagged animal	<b>24</b> 0
7. How To Create Maps From Biological Data Using R	254
Exercise 5.1: How to make a map showing the distribution	
of point locations in relation to other features	<i>257</i>
Exercise 5.2: How to make a map which uses pie charts as	
markers for a point location data set	279
Exercise 5.3: How to make a map displaying data from a	
raster data set	297
Appendix I: A List Of All the R Packages Used For The	
Exercises In This Workhook	318
